GREEN BLAZE MOBILE ENERGY SYSTEM: A HIGH SPEED PYROLYSIS PLANT

WE SUPPLY THIS SUPERIOR GREEN ENERGY SYSTEM BY USING ANY HYDROCARBON-CONTAINING WASTE, SUCH AS MINICIPAL SOLID WASTES, DIRTY COAL, INDUSTRIAL AND COMMERCIAL WASTE, WOODCHIP & SAWDUST, ANIMAL MANURE & FAT, FOOD RESIDUES & OIL, SEWAGE SLUDGE OR ANY OTHER RURAL AND URBAN WASTES CAN ALL BE USED AS RAW MATERIAL. FROM THE RAW MATERIAL FED INTO THE PLANT, IT GENERATES A FUEL CALLED DME (DIMETHYL ETHER) WHICH HAS A PROPERTY VERY SIMILAR TO LNG (LIQUEFIED NATURAL GAS).

THERE ARE TWO FOLDS OF SIGNIFICANT PURPOSES IN THE PLANT, IT REMOVES THE UNNECESSARY WASTES FROM THE SURFACE OF THE MOTHER EARTH BUT AT THE SAME TIME IN TURNING THEM INTO GREEN ENERGY. THE LIFE CYCLE OF A PLANT CAN EASILY BE 10 YEARS.

TO SET UP THE PLANT WOULD ONLY NEED AN AREA OF APPROXIMATELY 150 SQUARE METRES. THIS MAKES US THE FORERUNNERS IN SAVING THE PLANET EARTH AND KEEPING IT GREEN, FOR THE FUTURE OF THE HUMAN RACE.
